Приложение А

Структурная электрическая схема мобильного устройства распознавания объектов в видеообразе.

Приложение Б

Принципиальная электрическая схема мобильного устройства распознавания объектов в видеообразе.

Приложение В

Код алгоритма по созданию базы HOG дескрипторов.

```
from imutils import paths
import face recognition
import pickle
import cv2
import os
# в директории Images хранятся папки со всеми изображениями
imagePaths = list(paths.list images('Images'))
knownEncodings = []
knownNames = []
# перебираем все папки с изображениями
for (i, imagePath) in enumerate(imagePaths):
    # извлекаем имя человека из названия папки
   name = imagePath.split(os.path.sep)[-2]
    # загружаем изображение и конвертируем его из BGR (OpenCV ordering)
    # B dlib ordering (RGB)
    image = cv2.imread(imagePath)
    rgb = cv2.cvtColor(image, cv2.COLOR BGR2RGB)
    \# используем библиотеку Face recognition для обнаружения лиц
   boxes = face recognition.face locations(rgb, model='hog')
    # вычисляем эмбеддинги для каждого лица
   encodings = face recognition.face encodings(rgb, boxes)
    # loop over the encodings
    for encoding in encodings:
       knownEncodings.append(encoding)
        knownNames.append(name)
# сохраним эмбеддинги вместе с их именами в формате словаря
data = {"encodings": knownEncodings, "names": knownNames}
# для сохранения данных в файл используем метод pickle
f = open("face enc", "wb")
f.write(pickle.dumps(data))
f.close()
```

Приложение Г

Код алгоритма для распознавания объектов в видеообразе.

```
